

Additional risk factors for adverse outcome in fetus with IUGR

1. Oligohydramnios
2. Abnormal Doppler velocimetry results
 - a. Abnormal Umbilical artery Doppler (reversal of end diastolic flow)
 - b. Abnormal Cerebroplacental ratio (CPR) (middle cerebral artery Doppler indices divided by umbilical artery indices)
3. Maternal risk factors (i.e. preeclampsia with severe features)
4. Comorbidities
